IN THE CLAIMS:

Amendments to the Claims

Please amend the claims as shown below.

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (currently amended) An ultrasound probe comprising: <u>a plurality of</u> transducers for transmitting and receiving an ultrasound respectively located in correspondence with adjacent positions of transmission and reception; and a one or two layer flexible circuit board of at least one layer located in correspondence with the said positions of transmission and reception, in which signal lines for supplying a transmission signal and <u>for extracting a reception signal to/from the said positions</u> are installed in a longitudinal direction of the transducers at a predetermined angle, wherein the flexible circuit board has slits dividing signal lines <u>into sections</u> at each of the <u>said positions</u> at the <u>a predetermined angle</u>, and each section of the flexible circuit board divided by the slits are <u>is spirally wound</u>.
- (currently amended) An ultrasound probe according to claim 1, wherein a member is provided around each section spirally wound section of the flexible circuit board.
- 3. (currently amended) An ultrasound probe according to claim 2, wherein the said member is made of an insulating material covering a-the circumference of each section of the flexible circuit board, and a first shield material, or an insulating material to which a layer of metallic powder is evaporated, covering-covers the circumference of each part.

- 4. (currently amended) An ultrasound probe according to claim 2, wherein the <u>said</u> member is a single second shield material or a protection material covering an outer circumference of bundled sections of the flexible circuit board, or a protection material to which a layer of metallic powder is evaporated on its surface.
- 5. (currently amended) An ultrasound probe according to claim 3, wherein the-said member includes a single second shield material or a protection material covering the outer circumference of bundled sections of the flexible circuit board, or a protection material to which a layer of metallic powder is evaporated on its surface.
- 6. (currently amended) An ultrasound probe according to claim 4, wherein the protection material is in the form of a flexible tube.
- 7. (currently amended) An ultrasound probe according to claim 4 or <u>claim</u>
 5, wherein the protection material covers the outer circumference of bundled
 sections of the flexible circuit board, which has a stiff section and a flexible section.
- 8. (currently amended) An ultrasound probe according to claim 3, wherein the said member includes a single second shield material covering the outer circumference of bundled sections of the flexible circuit board and a protection material installed inside or outside the second shield material, or a protection material to which a layer of metallic powder is evaporated on its surface.
- 9. (currently amended) An ultrasound probe according to claim 2, wherein a signal line is provided on one layer of the <u>a</u>two-layer flexible circuit board, and a ground line is provided on the other layer.
